Find the payment option that works best for you  
When it comes to how to pay your energy bill, you  
have choices.

You can:

- Set up Automatic Payment in My Account
- Make a one-time payment online
- Pay by text
- Call 1-800-ALLIANT and say, "make a payment."

Explore these and other options and pay your  
way at [alliantenergy.com/paymentoptions](http://alliantenergy.com/paymentoptions).

**THANK YOU FOR YOUR PAYMENT**

Bright ideas to power your life

We provide this natural gas safety information in fulfillment of federal requirements detailed in RP1162.

Interstate Power and Light/Wisconsin Power and Light

## PowerHouse® TIP of the MONTH

### Check out My Account

World Energy Efficiency Day is this month. Do you know how much energy you use? Find out with My Account.

My Account has everything you need to manage your energy in one place. Track what you use by hour, day or month, set up high usage alerts and much more.

When you keep an eye on your energy, it helps you plan more wisely and find saving opportunities.

Learn more about this month's tip and other ways to save at [powerhousetv.com/tips](http://powerhousetv.com/tips).

## Find peace of mind with energy assistance

Are you ready for spring? Along with warmer weather, April will bring the end of the moratorium on energy service disconnections for qualifying customers. If you faced financial hardship and have fallen behind, help is available.

**Visit our website. We can help you:**

- Consider assistance options.
- Explore payment plans.
- Pay with a credit card.
- Set up high-usage alerts.

We also have tips to weatherize your home and use less energy. Learn more at [alliantenergy.com/energyassistance](http://alliantenergy.com/energyassistance).

## Detecting a gas leak

### Know the signs of a gas leak

The unintentional release of natural gas is dangerous to you and the public. It could result in fire, explosions, injury or death. Call Alliant Energy at 1-800-ALLIANT (800-255-4268) if you:

- Smell the odor of rotten eggs. If you don't know the scent, request a free scratch-and-sniff card at [alliantenergy.com/gas](http://alliantenergy.com/gas).
- Hear hissing, roaring or whistling sounds near a gas appliance, meter or pipeline.
- See blowing dirt, bubbling water or discolored vegetation in an otherwise green area.
- See a gas meter dial that continues to move after all natural gas appliances and equipment have been shut off.

### Smell gas? Move fast

Natural gas is colorless and has no scent. We add a strong odorant that smells like rotten eggs to help you detect possible leaks. If you suspect a leak, call **1-800-ALLIANT (800-255-4268)** immediately. We will investigate for free. Gas leaks are dangerous and can result in fire, explosion, injury or death. Protect yourself and your family by learning the signs of a leak and what to do.

### If you suspect a gas leak, follow these do's and don'ts

#### Do's

- Make sure gas appliances are turned all the way off.
- Contractors: Turn off and abandon equipment.
- IMMEDIATELY evacuate everyone from the building or area.
- Leave the area and warn others to stay away.
- Call 1-800-ALLIANT from a remote location. Do not return until we confirm it is safe.
- If you hear gas hissing or blowing, which is a more serious issue, evacuate to a remote location and call 911.

#### Don'ts

- Do not try to find or repair the leak or extinguish a burning gas leak.
- Do not move appliances or machinery.
- Do not start an engine of any kind.
- Do not strike matches or create a flame of any kind.
- Do not use a telephone or cell phone. These can ignite gases or vapors.
- Do not turn on or off any light, electrical switches or garage door openers. These also can ignite airborne gases.

### Do I need a natural gas detector?

Although Alliant Energy adds a distinctive odor to natural gas as a safety precaution to assist in the detection of a leak, your sense of smell might not be enough to detect it.

Here are a few reasons you may not be able to rely on smell alone:

- Strong smells in the area, like cooking or chemical odors, can mask the smell of natural gas.
- Prolonged exposure to the same smell can desensitize you to it (this is called olfactory fatigue).
- Certain conditions in the soil or pipes can cause the odorant to fade or be stripped out of the gas so it's not readily detectable.

Individuals with a known inability to smell are especially at risk. If this is you, don't take chances; experts recommend a natural gas detector for all indoor spaces. Carefully follow the manufacturer's directions for operation, placement and maintenance.

## Understand pipelines

### Have you ever wondered how natural gas gets to your home?

Safe, reliable natural gas is extracted from the Earth. It travels to your community through underground transmission pipelines.

The National Transportation Safety Board says pipelines are the safest way to transport gas.

When natural gas reaches your community, a local distribution company, such as Alliant Energy, reduces the gas pressure and adds an odorant. The odorant gives natural gas a rotten egg smell to help detect gas leaks.

Inside your community, the natural gas travels through pipelines called mains. Mains are often buried underground or along streets. From there, a smaller service line, approximately half an inch to 1 inch in diameter, brings the natural gas to your meter. Those lines are buried in yards.

After the gas passes through a meter, it belongs to you, the customer. You are responsible for installing and maintaining the piping through which natural gas flows to reach appliances and equipment for heat, hot water and cooking.

### If you hit a pipeline

Call **1-800-ALLIANT** if your digging equipment or tools contact our underground pipelines or electrical lines.

Even minor damage such as nicks, scratches, cuts, scrapes, dents and gouges can result in pipeline failure, electric shock or a major incident in the future if not properly assessed.

If you hear blowing gas, which is a more serious problem, call 911 immediately from a safe location.

### Look for pipeline markers

Pipeline markers (pictured):

- Indicate the approximate location of buried pipelines.
- Provide a toll-free number (1-800-255-4268) to report problems.
- Are typically placed at public road crossings, fence lines and street intersections.

In most cases, the natural gas distribution pipelines do not have pipeline markers inside urban service areas. To identify where any type of pipeline is located, visit [call811.com](http://call811.com) or call 811 before you dig.

Visit the National Pipeline Mapping System at [npms.phmsa.dot.gov](http://npms.phmsa.dot.gov) to learn who operates transmission pipelines in your area.

### Do you know where lines are buried on your property?

Although accidents are relatively rare, damage from digging is the most common cause of underground natural gas leaks.

Three steps you must follow before you dig:

- 1. Visit [call811.com](http://call811.com) or call 811.**  
811 is the free national phone number that initiates the process of locating and marking the underground utility lines in your yard or at your job. Dial 811 at least three business days before you dig.
- 2. Wait for the utility lines to be marked.**  
811 center personnel notify area utilities such as Alliant Energy to mark the approximate locations of buried gas or electric lines with high-visibility safety paint and/or flags. There is no charge for this service. Locators will not mark privately owned fuel lines, like those running to a garage, pool or fire-place.
- 3. Respect the marks or flags and dig with care.**  
When you start digging, stay at least 18 inches away from the marked lines. Hand dig with extreme caution in the 18-inch tolerance zone.

## Working together

### Staying safe is a community effort

We consider emergency responders and public officials our partners in prevention. We share information and participate in meetings with other pipeline companies. We also work with emergency responders to help them understand the risks of natural gas and the best ways to prepare for, prevent and respond to pipeline emergencies.

### Be a good neighbor: Report suspicious activity near pipeline facilities

Call 1-800-ALLIANT if you observe people taking photos or loitering near our pipeline facilities, or if you smell a strong odor coming from a building or vehicle.

### Tips to keep you safe in your home

A qualified professional should check your gas appliances annually. Inspections keep gas appliances safe and efficient, and they reduce the risk of carbon monoxide poisoning.

- Snow and ice can damage gas meters and pipes. Use a broom to keep gas service equipment clear during winter.
- Never place a fire pit above a buried line. If the fire gets too hot, it could cause the gas pipeline below it to leak or melt. Visit [call811.com](http://call811.com) or call 811 before you set your fire pit.
- Every home should have natural gas detectors, carbon monoxide detectors, smoke detectors and fire extinguishers.

## Keep your gas meter and service accessible and safe

To perform required safety inspections on our pipelines, we must have clear access to the pipeline right-of-way (the area on either side of our pipelines).

This area must be kept clear of trees, fences, buildings and other structures. If you plan to do work on your property that will affect the location or accessibility of a gas meter or service line, please call us to evaluate your plans.

To learn about our integrity management program or other natural gas pipeline safety topics, visit [alliantenergy.com/gas](http://alliantenergy.com/gas) or call 1-800-ALLIANT.
